

Super Slide Cutter for Mamiya M645

Mamiya
CAMERA CO., LTD.

The Super Slide Cutter is for use in cutting slide films taken with the Mamiya M645 or M645 1000S for mounting in Super Slide Mounts.

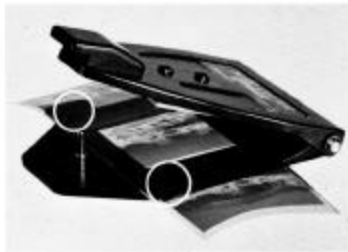

■ How to Use

● To determine format

When taking photographs for mounting in Super Slide Mounts, use the Super Slide Mask to determine the exact format.

1. Remove the finder from the camera, place the Super Slide Mask on the focusing screen and replace the finder.
2. The area covered by Super Slides is indicated by the dotted lines on either side of the Super Slide Mask and the top and bottom of the finder frame.

● To mount slides

1. Use the Cutter Lever to open the Super Slide Cutter, place the film to be cut on the lower blade and determine the area to be used.
2. Hold the film in place by pressing it against either of the two protrusions with one finger; then cut the film by pushing down on the Cutter Lever, using care not to catch the finger in the Cutter.

★ It is advisable to wear gloves when cutting films to prevent soiling or fingerprints.
